The arch and the pier

This path meets the contact and friction checks.

Modern 13-block symmetric equilibrium experiment; no tension, unlimited compression, static Coulomb friction |T| <= μN with uniform illustrative μ = 0.65 at every joint and both pier bases. Not a measured ancient material, an ancient design rule or a structural safety assessment.

Your experiment

Arch shape

Centreline span 2; rise 1; radial thickness 0.24. Length unit: one half-span.

Load

Own weight W = 1; extra 1 W on the crown stone. Every geometry is renormalized to W = 1.

Trial

Horizontal thrust 0.64646079 W; left joint contact 92.70259846% from the inner edge. C = 1.10248624 W half-span.

Each pier

Base width 1; height 1; weight 1 W. Base resultant 0.374474 outward from its centre; available half-width 0.5.

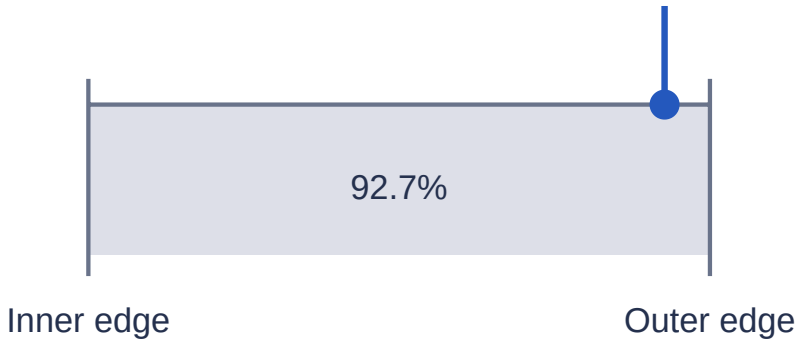

Sliding assumption

Uniform illustrative μ = 0.65. Joint friction passes; base friction passes. For this trial, the greatest required |T|/N is 0.64646079. This is not a minimum over all paths or a measured material value.

The blue line joins interface contacts to guide the eye. It is not a continuous stress solution inside the stones.

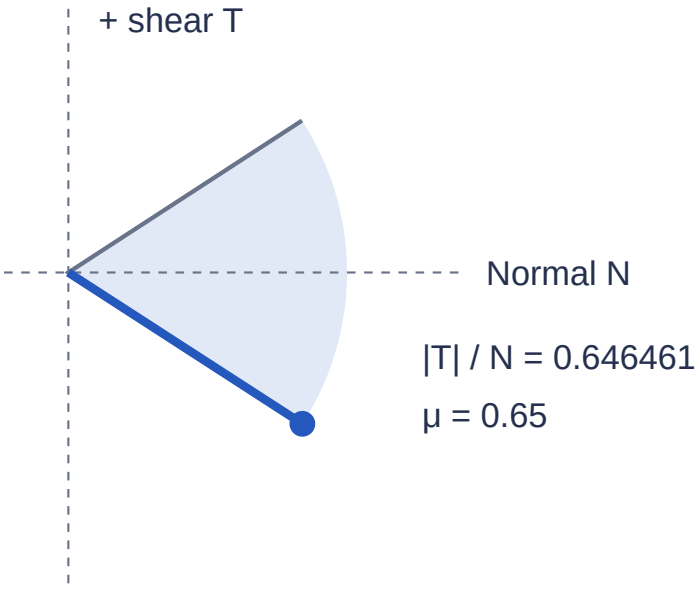

Contact need not stay within the middle third: joints may open partly under this ideal model. Edge contact is a limiting state with no finite stress solution. Finite static friction is checked at all fourteen joints and both bases with the chosen illustrative coefficient. Material strength is not evaluated.

Selected joint 0, rotated and enlarged

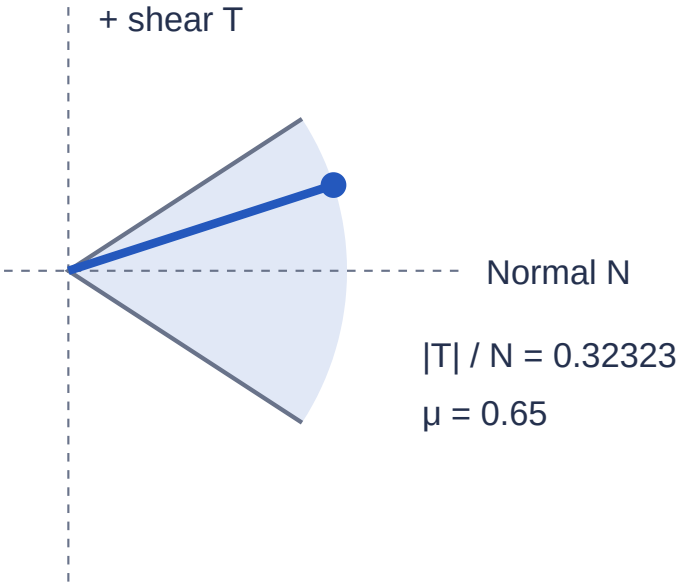

Force directions and sliding

Joint 0

Directions only; force sizes in W below.

Either pier base

Directions only; force sizes in W below.

Shaded cones show |T| ≤ μN. The ray direction, not its length, is compared with the cone. No cone is drawn when sliding is excluded by assumption. At a base, N = V + P and |T| = H. Increasing pier weight can help base friction; increasing width alone cannot. These are static equilibrium tests, not a simulation of motion after failure.

Joint	Contact from inner edge	Normal force, W	Shear, W	Contact	Required μ	Friction
0	92.7026%	1	-0.646461	Inside	0.646461	Within limit

Read Vitruvius

Latin: F. Krohn's 1912 edition, printed p. 141. New English and notes for Gonia. Joined line-end hyphens; sentence punctuation adapted for parallel reading. Readings 3 and 4 form one sentence. These passages describe relieving arches and their supports, not the equations of modern limit analysis.

An arch can relieve a wall's weight

item administrandum est, uti levent onus parietum fornicationes cuneorum divisionibus et ad centrum respondentes earum conclusurae.

Care must also be taken that arches, with their divisions into wedges and their closures directed toward the centre, relieve the weight of the walls.

uti levent states the intended result: ‘that they relieve’. onus is the object, ‘weight’; fornicationes is the subject, ‘arches’. ad centrum refers to radial construction, not to the modern blue force path. Krohn's apparatus records variant readings at cuneorum.

The timber underneath can be replaced

cum enim extra trabes aut liminum capita arcus cuneis erunt conclusae, primum non pandabit materies levata onere; deinde, si quod vetustate vitium ceperit, sine molitione fulturarum faciliter mutabitur.

For when arches have been closed with wedges above the beams or the ends of the lintels, first the timber, relieved of its load, will not sag; then, if it develops a defect through age, it will be easily replaced without constructing props.

levata onere is ‘relieved of the load’. The passage describes a relieving arch over timber. Our isolated arch omits that timber and the wall above it; it is not a reconstruction of this arrangement. Krohn prints the unusual arcus … conclusae; the reading is retained.

The outer piers need more breadth

itemque, quae pilatim aguntur aedificia et cuneorum divisionibus coagmentis ad centrum respondentibus fornices concluduntur, extremae pilae in his latiores spatio sunt faciundae, uti vires eae habentes resistere possint,

Likewise, in buildings carried on piers, where arches are closed with wedge divisions and joints directed toward the centre, the outer piers must be made broader in extent, so that, having strength, they can resist,

The sentence continues in the next reading. latiores is comparative, ‘broader’; sunt faciundae expresses an obligation, ‘must be made’. There is no numerical pier-width formula here. Our width and mass controls are modern independent choices.

The loaded wedges can push the bearings out

cum cunei ab oneribus parietum pressi per coagmenta ad centrum se prementes extruderent incumbas.

since the wedges, pressed by the loads of the walls and pressing against one another through the joints toward the centre, would push out the bearings.

This completes the preceding sentence. pressi is passive, ‘pressed’; se prementes is active and reciprocal here, ‘pressing against one another’. extruderent is ‘would push out’. The Latin describes an effect; it does not supply our equilibrium equations or assumptions.

Restraint belongs to the whole work

itaque si angulares pilae erunt spatiosis magnitudinibus, continendo cuneos firmitatem operibus praestabunt.

And so, if the corner piers are of ample size, by restraining the wedges they will provide stability to the works.

continendo is an ablative gerund, ‘by restraining’; cuneos is what is restrained. firmitatem is the object of praestabunt, ‘they will provide stability’. It is a claim about support, not a certificate for a particular surviving arch.

Words in this passage

cuneus · cunei · cuneos
wedge · wedges · wedges as object. A wedge-shaped stone in this context. cunei is nominative plural in the pushing clause; cuneos is accusative plural after continendo in the final clause.

coagmentum · coagmenta
joint · joints. The meeting of pieces. per coagmenta means ‘through the joints’. The model checks where a resultant crosses each radial joint; it tests joint friction only in the optional modern finite-friction model.

centrum · ad centrum
centre · toward the centre. The common centre of the radial divisions. In a shallow circular arch this centre lies below the spring level. It is a geometric centre, not a centre of gravity.

pila · pilae
pier · piers. A massive support here, rather than the word for a slender column, columna. extremae pilae are the outer piers; angulares pilae are the corner piers.

onus · onera · oneribus
weight or load · loads · by loads. One word changes form with its job in the sentence. ab oneribus parietum is ‘by the loads of the walls’. We use W for the arch's own weight and label any extra load separately.

latiores
broader. Comparative adjective agreeing with pilae. The author asks for more breadth, but the passage gives no particular ratio. Base width and weight are kept separate on the bench.

incumbas
bearings or supporting parts. Accusative plural, the object of extruderent: the parts that would be thrust out. ‘Abutments’ is a useful architectural rendering, not a claim that the word specifies our support shape.

firmitatem
stability or strength. Accusative singular of firmitas. The author says the piers provide it by restraining the wedges. Our much narrower result is equilibrium under explicit ideal assumptions.

Assumptions and a reproducible model

Thirteen equal-angle annular sectors. Self-weight acts at each exact area centroid and sums to W = 1. Symmetric vertical extra loads have their own stated magnitudes. Symmetry fixes the vertical reaction at each spring to half the total load. At each radial joint the resultant is located from force and moment equilibrium. A complete interval calculation tests every inner/outer edge pair and, in finite-friction mode, intersects the two Coulomb shear bounds at each joint and base. It does not sample trial paths.

Every pier has a symmetric base, width b, height h = 1 and independent weight P. Its base resultant's outward eccentricity is e = (C + Hh - V)/(V + P). It fits when |e| is at most b/2. The support head is shaped to meet the spring joint; its weight is idealized on its centreline.

Modern 13-block symmetric equilibrium experiment; no tension, unlimited compression, static Coulomb friction |T| <= μN with uniform illustrative μ = 0.65 at every joint and both pier bases. Not a measured ancient material, an ancient design rule or a structural safety assessment. There is no mortar, soil bearing, settlement, crushing, elastic response, earthquake, construction sequence or three-dimensional restraint. The finite interface check is not a continuous stress solution. No dimensions or loads are a survey of a historical structure. A failed trial does not prove that every path fails. A fitted path is one equilibrium witness under these assumptions.

Full model and formulas. Heyman, The stone skeleton (1966); ETH Zurich, Arch bridges (2025 lectures). Drake: static Coulomb friction. Modern illustrations are not reproduced.

culum inferiorum medio conlocentur, uti solido respon-
deant; nam si in pendentibus onera fuerint parietum aut
columnarum, non poterint habere perpetuam firmitatem.
praeterea inter lumina secundum pilas et antas postes si 2
supponentur, erunt non vitiosae. limina enim et trabes
structuris cum sint oneratae, medio spatio pandantes fran-
gunt sub lysi structuras; cum autem subiecti fuerint et
subcuneati postes, non patiuntur insidere trabes neque
eas laedere. item administrandum est, uti levent onus 3
parietum fornicationes cuneorum divisionibus et ad cen-
trum respondentes earum conclusurae. cum enim extra
trabes aut liminum capita arcus cuneis erunt conclusae,
primum non pandabit materies levata onere; deinde, si
quod vetustate vitium ceperit, sine molitione fulturarum
faciliter mutabitur. itemque, quae pilatim aguntur aedificia 4
et cuneorum divisionibus coagmentis ad centrum respon-
dentibus fornices concluduntur, extremae pilae in his la-
tiores spatio sunt faciundae, uti vires eae habentes re-
sistere possint, cum cunei ab oneribus parietum pressi per
coagmenta ad centrum se prementes extruderent incumbas.
itaque si angulares pilae erunt spatiosis magnitudinibus,
continendo cuneos firmitatem operibus praestabunt.

Cum in his rebus animadversum fuerit, uti ea diligentia 5
153 in his adhibeatur, non minus etiam observandum est, uti
omnes structurae perpendiculo respondeant neque habeant
in ulla parte proclinationes. maxima autem esse debet
cura substructionum, quod in his infinita vitia solet facere
terrae congestio. ea enim non potest esse semper uno
pondere, quo solet esse per aestatem, sed hibernis tem-
poribus recipiendo ex imbribus aquae multitudinem cre-
scens et pondere et amplitudine disrumpit et extrudit struc-
turarum saeptiones. itaque, ut huic vitio medeatur, sic 6
erit faciundum, ut primum pro amplitudine congestionis

SIL OPEN FONT LICENSE Version 1.1 - 26 February 2007
-----------------------------------------------------------

PREAMBLE
The goals of the Open Font License (OFL) are to stimulate worldwide
development of collaborative font projects, to support the font creation
efforts of academic and linguistic communities, and to provide a free and
open framework in which fonts may be shared and improved in partnership
with others.

The OFL allows the licensed fonts to be used, studied, modified and
redistributed freely as long as they are not sold by themselves. The
fonts, including any derivative works, can be bundled, embedded,
redistributed and/or sold with any software provided that any reserved
names are not used by derivative works. The fonts and derivatives,
however, cannot be released under any other type of license. The
requirement for fonts to remain under this license does not apply
to any document created using the fonts or their derivatives.

DEFINITIONS
"Font Software" refers to the set of files released by the Copyright
Holder(s) under this license and clearly marked as such. This may
include source files, build scripts and documentation.

"Reserved Font Name" refers to any names specified as such after the
copyright statement(s).

"Original Version" refers to the collection of Font Software components as
distributed by the Copyright Holder(s).

"Modified Version" refers to any derivative made by adding to, deleting,
or substituting -- in part or in whole -- any of the components of the
```

Original Version, by changing formats or by porting the Font Software to a
new environment.

"Author" refers to any designer, engineer, programmer, technical
writer or other person who contributed to the Font Software.

PERMISSION & CONDITIONS
Permission is hereby granted, free of charge, to any person obtaining
a copy of the Font Software, to use, study, copy, merge, embed, modify,
redistribute, and sell modified and unmodified copies of the Font
Software, subject to the following conditions:

1) Neither the Font Software nor any of its individual components,
in Original or Modified Versions, may be sold by itself.

2) Original or Modified Versions of the Font Software may be bundled,
redistributed and/or sold with any software, provided that each copy
contains the above copyright notice and this license. These can be
included either as stand-alone text files, human-readable headers or
in the appropriate machine-readable metadata fields within text or
binary files as long as those fields can be easily viewed by the user.

3) No Modified Version of the Font Software may use the Reserved Font
Name(s) unless explicit written permission is granted by the corresponding
Copyright Holder. This restriction only applies to the primary font name as
presented to the users.

4) The name(s) of the Copyright Holder(s) or the Author(s) of the Font
Software shall not be used to promote, endorse or advertise any
Modified Version, except to acknowledge the contribution(s) of the
Copyright Holder(s) and the Author(s) or with their explicit written
permission.

5) The Font Software, modified or unmodified, in part or in whole,
must be distributed entirely under this license, and must not be
distributed under any other license. The requirement for fonts to
remain under this license does not apply to any document created
using the Font Software.

TERMINATION
This license becomes null and void if any of the above conditions are
not met.

DISCLAIMER
THE FONT SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND,
EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTIES OF
MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT
OF COPYRIGHT, PATENT, TRADEMARK, OR OTHER RIGHT. IN NO EVENT SHALL THE

binary files as long as those fields can be easily viewed by the user.

3) No Modified Version of the Font Software may use the Reserved Font
Name(s) unless explicit written permission is granted by the corresponding
Copyright Holder. This restriction only applies to the primary font name as
presented to the users.

4) The name(s) of the Copyright Holder(s) or the Author(s) of the Font
Software shall not be used to promote, endorse or advertise any
Modified Version, except to acknowledge the contribution(s) of the
Copyright Holder(s) and the Author(s) or with their explicit written
permission.

5) The Font Software, modified or unmodified, in part or in whole,
must be distributed entirely under this license, and must not be
distributed under any other license. The requirement for fonts to
remain under this license does not apply to any document created
using the Font Software.

TERMINATION
This license becomes null and void if any of the above conditions are
not met.
